## **CHOOSE CERTAINTY. ADD VALUE.**

---

We add economic value by increasing safety, quality and sustainability. In doing so, we remain true to the purpose for which our company was established in 1866, by bringing together people, technology and the environment, for a safer and more sustainable future. By optimizing technology, systems and expertise, we enhance our customers' competitiveness worldwide and play our part in making the world a safer place.

---

## INDUSTRY SEGMENT

### INDUSTRY SERVICE

---

Services for the safe, economical, efficient and reliable operation of industrial plant and infrastructure facilities, refineries and power plants. Services for the planning, optimization, construction, operation and dismantling of such plant. Consulting in the area of renewable energy, particularly wind power, as well as risk management and consulting for industrial companies.

### REAL ESTATE & INFRASTRUCTURE

---

Services for the real estate sector and in the areas of structural engineering, materials handling, electrical engineering and building systems, real estate valuation, due diligence and asset management. Infrastructure services in the field of rail technology, including railway vehicles, transport systems and water management, aimed at manufacturers, operators and government authorities.

# MOBILITY SEGMENT

## AUTO SERVICE

---

Comprehensive modular service portfolio for the automotive industry and retail customers. From official services, such as road-worthiness tests and exhaust-gas analyses, to car assessments and appraisals, driver's license tests, homologation, type approvals, vehicle services, claims and fleet management through to vehicle registration.

## CERTIFICATION SEGMENT

### PRODUCT SERVICE

---

Services across the entire supply chain aimed at ensuring market readiness of consumer, medical and industrial products. Associated testing, inspections and certification in a global network of laboratories: from simple toys to complex machines, from microwave ovens to components for the automobile industry, and from textiles to foodstuffs.

### MANAGEMENT SERVICE

---

Certification of management systems, primarily in the areas of quality, the environment, energy, health, industrial health and safety, foodstuffs, education and IT security, for all industries. Management excellence certification for process and business optimization. Energy-efficiency certification and penetration tests for IT security. Global QM service and project management.

## OTHER DIVISIONS

### ACADEMY

---

Corporate education and training in the form of standard courses and tailored training solutions in the fields of technology and management. Certification and training of persons. Company-specific education management from requirements analysis to ensuring learning transfer. International conferences and congresses.

### LIFE SERVICE

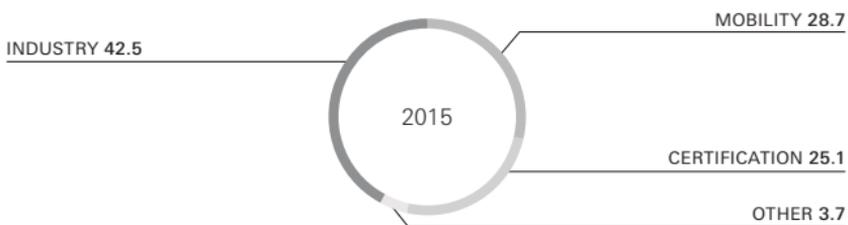

---

Services relating to driving suitability for private individuals at more than 80 locations in Germany. Appraisals within the scope of the medical-psychological assessment, medical certification of suitability to drive and programs for verifying abstinence from drugs and alcohol, as well as suitability tests for vehicle drivers with particular responsibility.

## 150 YEARS OF INSPIRING TRUST

---

TÜV SÜD is celebrating its 150th anniversary in 2016. Since 1866, the company has been ensuring that people can place their trust in new technologies. This success story began during the first industrial revolution, with the company's foundation as a steam boiler inspection association, and continues in today's modern, increasingly networked world. Now, as in the past, TÜV SÜD plays a key role in making the world a safer place: as a future-oriented service provider with a high level of technical expertise. Bringing together technological advances and the desire for safety and protection is a societal need and TÜV SÜD's task today, just as it was 150 years ago.

---

150 YEARS

---

## 150 YEARS OF SUCCESS

---

**1866**

Twenty-two steam boiler operators establish a steam boiler inspection association in Mannheim, with the goal of protecting people, the environment and assets against the negative effects of a new and largely unknown technology. The aim is to prevent future accidents through regular boiler inspections. The idea catches on, and the foundation of the Mannheim-based association marks the inception of technical inspection activities in Germany.

**1870**

Further associations are founded in Munich (1870), Offenbach (1873), Stuttgart (1875) and Chemnitz (1878). They prove to be a success:

there is a significant drop in the number of explosions.

**1903**

First inspections of electrical systems.

**1906**

First vehicle roadworthiness test.

**1914**

First inspection of consumer goods.

**1930**

First safety inspections of amusement rides at fun fairs.

## 1938

In the Third Reich, the independent inspection associations are forced to become standardized technical inspection associations (TÜV).

## 1951

Regular vehicle roadworthiness tests by TÜV associations in Western Germany, which regained their independence following World War II. In the years that follow, establishment of a comprehensive service station network.

## 1977

Introduction of the GS Mark, which shows consumers the "Geprüfte Sicherheit" (tested safety) of consumer articles.

## 1990

Merger of the TÜV associations in southern Germany to form TÜV SÜD.

## 1991

Expansion into Asia and the USA. Branch offices are established in locations such as Hong Kong, Japan, Taiwan and the US states of California and Massachusetts.

## 2001

Introduction of the blue octagon as the official company logo.

## Since 2006

Numerous acquisitions of inspection companies in Europe, Asia, Africa and the Americas.

## Today

TÜV SÜD employs more people abroad than in Germany and continues to systematically pursue a strategy of internationalization and growth.
